Layering scheme for RED-WHITE individualization

Layering instructions - crea.lign GUM

The bone is represented with beige.

The effect of depth is achieved with lila. Lila is spread from the mucolabial fold towards the teeth.

The layers that were previously applied are coated with pink.

The alveolar sockets are accentuated with rose.

Well perfused areas are accentuated with red.

Light is applied to the gingival margin.

The entire surface is sealed with transpa.
